

Let's take a step towards raising awareness of hereditary angioedema!

## Hereditary angioedema

Hereditary angioedema (HAE) is an autosomal dominant disease caused by the lack of C1-inhibitor protein that affects one in 50,000 people.

# HIKE FOR HAE

Each year prior to the International hae day :-] efforts are made to increase awareness about this rare disease. This year, Patient Association HAE Serbia is organizing a walk on **Avala** mountain as part of our awareness campaign. You can join this event on **May 11th 2024**.

This event is open to members and friends of the association, family members, and anyone who wants to participate.

Let's make a difference, one step at a time.
